

ASSIGNMENT 1

JAVASCRIPT OPERATORS

1. Find the odd and even number using operator.

```
1  <!DOCTYPE html>
2  <html lang="en">
3  <head>
4      <meta charset="UTF-8">
5      <meta name="viewport" content="width=device-width, initial-scale=1.0">
6      <title>Odd and Even</title>
7  </head>
8  <body>
9      <script>
10         let num;
11         num = prompt("Enter a number: ");
12
13         if(num % 2 == 0) {
14             document.write(num + " is an even number.");
15         } else {
16             document.write(num + " is an odd number.");
17         }
18     </script>
19 </body>
20 </html>
21
```

Output:

The screenshot shows a web browser window. At the top, the address bar displays "10.1.0.46:5500 says". Below it, a prompt dialog box is open with the text "Enter a number:". The input field contains the number "24". There are two buttons at the bottom of the dialog: "OK" and "Cancel". Below the dialog box, a small rectangular box displays the output of the JavaScript code: "24 is an even number."

2. Find the largest value among 3 value that take from user.

```
1  <!DOCTYPE html>
2  <html lang="en">
3  <head>
4      <meta charset="UTF-8">
5      <meta name="viewport" content="width=device-width, initial-scale=1.0">
6      <title>Largest Number Checker</title>
7  </head>
8  <body>
9      <script>
10         let num1, num2, num3;
11
12         num1 = parseInt(prompt("Enter first number: "));
13         num2 = parseInt(prompt("Enter second number: "));
14         num3 = parseInt(prompt("Enter second number: "));
15
16         if(num1 > num2 && num1 > num3) {
17             document.write(num1 + " is the largest number.");
18         } else if(num2 > num1 && num2 > num3) {
19             document.write(num2 + " is the largest number.");
20         } else {
21             document.write(num3 + " is the largest number.");
22         }
23     </script>
24 </body>
25 </html>
```

Output:

10.1.0.46:5500 says Enter first number: 12 OK Cancel	10.1.0.46:5500 says Enter second number: 8 OK Cancel	10.1.0.46:5500 says Enter second number: 24 OK Cancel
24 is the largest number.		

3. Compare the two strings.

```
1  <!DOCTYPE html>
2  <html lang="en">
3  <head>
4      <meta charset="UTF-8">
5      <meta name="viewport" content="width=device-width, initial-scale=1.0">
6      <title>String Compare</title>
7  </head>
8  <body>
9      <script>
10         let wordOne, wordTwo;
11         wordOne = prompt("Enter first word: ");
12         wordTwo = prompt("Enter second word: ");
13
14
15         if(wordOne === wordTwo) {
16             document.write(wordOne + " and " + wordTwo + " are same.");
17         } else {
18             document.write(wordOne + " and " + wordTwo + " are not same.");
19         }
20     </script>
21 </body>
22 </html>
```

Output:

The output shows two sequential prompts. The first prompt, titled "10.1.0.46:5500 says", asks "Enter first word:" and the user has entered "hello". The second prompt, also titled "10.1.0.46:5500 says", asks "Enter second word:" and the user has entered "world". Below these prompts, a text box displays the result: "hello and world are not same."

4. Student Result System

Write a JavaScript program using functions and logical operators to determine whether a student has Passed, Failed or Passed with Distinction based on the following criteria:

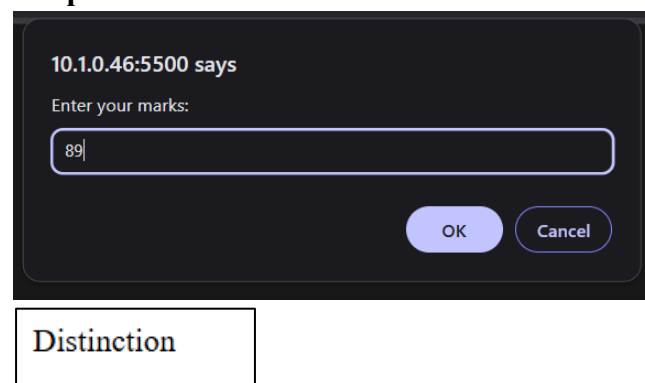

Marks ≥ 80 : Passed with Distinction

Marks ≥ 50 and < 80 : Passed

Marks < 50 : Failed

```
1  <!DOCTYPE html>
2  <html lang="en">
3  <head>
4      <meta charset="UTF-8">
5      <meta name="viewport" content="width=device-width, initial-scale=1.0">
6      <title>Result System</title>
7  </head>
8  <body>
9      <script>
10         let marks;
11
12         marks = prompt("Enter your marks: ");
13
14         if(marks >= 80) {
15             document.write("Distinction");
16         } else if(marks < 80 && marks >= 50) {
17             document.write("Passed");
18         } else if(marks < 50) {
19             document.write("Failed");
20         }
21     </script>
22 </body>
23 </html>
```

Output:

10.1.0.46:5500 says

Enter your marks:

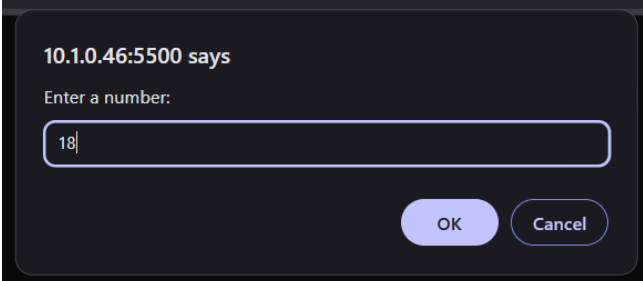

OK Cancel

Distinction

5. Write a function `checkNumber(num)` that uses relational operators to determine whether a number is: Positive, Negative, Zero

```
1  <!DOCTYPE html>
2  <html lang="en">
3  <head>
4      <meta charset="UTF-8">
5      <meta name="viewport" content="width=device-width, initial-scale=1.0">
6      <title>Positive, Negative or Zero Checker</title>
7  </head>
8  <body>
9      <script>
10         let num;
11         num = prompt("Enter a number: ");
12         if(num > 0) {
13             document.write("Entered number is positive.");
14         } else if(num < 0) {
15             document.write("Entered number is negative.");
16         } else {
17             document.write("Entered number is zero.");
18         }
19     </script>
20 </body>
21 </html>
```

Output:

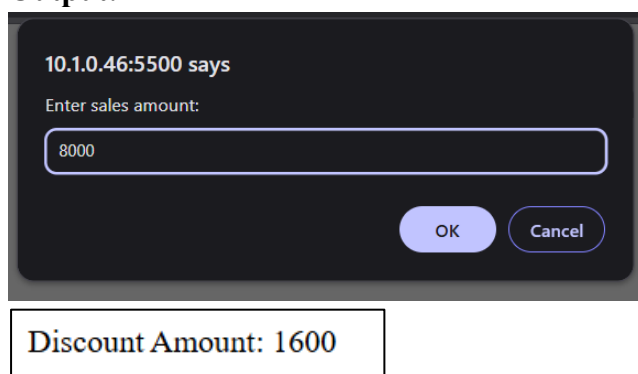

Entered number is positive.

6. Write a function `calculateDiscount(amount)` that returns:
- 20% discount if amount > 5000
 - 10% discount if amount is between 2000 and 5000
 - No discount otherwise.

```
1  <!DOCTYPE html>
2  <html lang="en">
3  <head>
4      <meta charset="UTF-8">
5      <meta name="viewport" content="width=device-width, initial-scale=1.0">
6      <title>Discount Calculation</title>
7  </head>
8  <body>
9      <script>
10         let salesAmount, discountAmount;
11         salesAmount = prompt("Enter sales amount: ");
12
13         if(salesAmount >= 5000) {
14             discountAmount = 0.2 * salesAmount;
15             document.write("Discount Amount: " + discountAmount);
16         } else if(salesAmount >= 2000 && salesAmount < 5000) {
17             discountAmount = 0.1 * salesAmount;
18             document.write("Discount Amount: " + discountAmount);
19         } else {
20             document.write("Sorry! No Discount");
21         }
22     </script>
23 </body>
24 </html>
```

Output:

The screenshot shows a web browser window. At the top, it says "10.10.46:5500 says". Below that is a prompt box with the text "Enter sales amount:". The input field contains the number "8000". There are two buttons: "OK" and "Cancel". Below the prompt box, a document.write output is displayed in a box, showing "Discount Amount: 1600".
